Project assignment

Music festival

(Specification of information system needs)

Design a conceptual model of the database that will be used by the information system for the Music Festival.

The system stores data about several music festivals. A music festival has data about the name, description, email address, and date and location of the festival. The date and location are stored in the Calendar table.

Each festival can have multiple organizers, for whom data on their first and last names are stored. Also, there are multiple employees at the festival, with data on their first and last names, who can have different responsibilities, and for each of the responsibilities, data on the start and end of the responsibilities is stored.

A festival is also characterized by multiple stages, and one stage can be at only one festival. Stages are characterized by a name and a label. Performances are performed on the stages. A performance is performed by a performer who can be either an individual musician or a band. Musicians are characterized by their first name, last name and nickname, and a band by the name of the band. A band consists of multiple musicians, while a musician does not have to be a member of a band. One performer can only perform once on one stage during the festival, and for that performance, information about the date and time of the performance.

Tickets are sold for the festival, which can be of different types. Ticket types are characterized by their names, and for each festival, which can have multiple ticket types, the price and maximum number of tickets of a certain type are determined. Ticket sales are carried out by the system administrator for the selected festival.

The system also stores data on sponsors representing sponsorship contracts with the start and end dates of the contract, as well as the value of the sponsorship. Data on the sponsor itself is stored on the name, website and city in which they are located. There can be multiple sponsors (companies) in a city, while one sponsor can only be from one city (headquarters).
